doi = {10.1017/S1360674309990402},
abstract = {This article examines the status of scalarity in the analysis of the
meaning of the English determiner
    any
    . The latter's position as a prime exemplar of the category of polarity-
sensitive items has led it to be generally assumed to have scalar meaning. Scalar
effects are, however, absent from a number of common uses of this word. This suggests
that
    any
    does not involve scales as part of its core meaning, but produces them as
a derived interpretative property. The role of three factors in the derivation of the
expressive effect of scalarity is explored: grammatical number, stress and the presence
of gradable concepts in the NP. The general conclusions point to the importance of
developing a causal semantic analysis in which the contributions of each of the various
meaningful components of an utterance to the overall message expressed are carefully
distinguished.},

    title = {New Work on Speech Acts},
    editor = {Fogal, Daniel and Harris, Daniel W. and Moss, Matt},
    year = {2018},
    edition = {First edition},
    publisher = {{Oxford University Press}},
    address = {{Oxford, United Kingdom}},
    abstract = {Speech-act theory is the interdisciplinary study of the wide range of
things we do with words. Originally stemming from the influential work of twentieth-
century philosophers, including J. L. Austin and John Searle, recent years have seen a
resurgence of work on the topic. On one hand, a new generation of linguists,
philosophers, and cognitive scientists have made impressive progress toward reverse-
engineering the psychological underpinnings that allow us to do so much with language.
Meanwhile, speech-act theory has been used to enrich our understanding of pressing
social issues that include freedom of speech, racial slurs, and the duplicity of
political discourse.  This volume presents fourteen new essays by many of the
philosophers and linguists who have led this resurgence. The topics span a
methodological range that includes formal semantics and pragmatics, foundational issues
about the nature of linguistic representation, and work on a variety of forms of
indirect and/or uncooperative speech that occupies the intersection of the philosophy of
language, ethics, and political philosophy. Several of the contributions demonstrate the
benefits of integrating the methodologies and perspectives of these literatures. The
essays are framed by a comprehensive introductory survey of the contemporary literature
written by the editors},

abstract = {[This paper takes stock on four crucial issues concerning free choice
items (FCIs). (1) Free choiceness is characterised via a minimal constraint enforcing
equivalence along a dimension. (2) Widening offers an intuitively appealing way of
describing the behaviour of FCIs, but is shown to be an effect rather than an
explanation. (3) Tenets of the existential vs universal debate are recalled and argued
to be non conclusive. (4) We explain why comparatives are (still) an unresolved puzzle.
Cet article fait le point sur quatre questions centrales concernant les termes de choix
libre (TCL). (1) Le noyau du choix libre est caractérisé par une contrainte minimale
d'équivalence dans une dimension. (2) L'élargissement est analysé comme un effet
et rejeté en tant qu'explication. (3) On montre que la question de la valeur
existentielle ou universelle des TCL ne trouve pas forcément une réponse unique. (4)
Enfin, on explique pourquoi les phrases comparatives posent (toujours) problème.]}},

abstract = {Speech-act theory is the interdisciplinary study of the wide range of
things we do with words. Originally stemming from the influential work of twentieth-
century philosophers, including J. L. Austin and John Searle, recent years have seen a
resurgence of work on the topic. On one hand, a new generation of linguists,
philosophers, and cognitive scientists have made impressive progress toward reverse-
engineering the psychological underpinnings that allow us to do so much with language.
Meanwhile, speech-act theory has been used to enrich our understanding of pressing
social issues that include freedom of speech, racial slurs, and the duplicity of
political discourse.00This volume presents fourteen new essays by many of the
philosophers and linguists who have led this resurgence. The topics span a
methodological range that includes formal semantics and pragmatics, foundational issues
about the nature of linguistic representation, and work on a variety of forms of
indirect and/or uncooperative speech that occupies the intersection of the philosophy of
language, ethics, and political philosophy. Several of the contributions demonstrate the
benefits of integrating the methodologies and perspectives of these literatures. The
essays are framed by a comprehensive introductory survey of the contemporary literature
written by the editors},

  abstract = {The paper teases apart two types of interpretations displayed by so-called 'universal' free choice (FC) determiners (e.g., French n'importe quel or Spanish cualquiera) depending on the kind of licensing environment they are placed in, which will be called parallel and serial universality respectively. Since serial universal readings are available to all FCIs cross-linguistically and the only possibility in some cases, they are taken to be the central semantic ingredient of free choice. Section 2 aims to establish a parallel between serial universality (particularly subtriggered sentences) and other constructions which involve semantically constrained pairs of events. The third section represent the co-variation of entity, event and world indices as an option that determiners have under certain (syntactic and semantic) conditions, and which FCIs have grammaticalized. The other ingredient which singles out serial universality from other event-related readings is the (non-optional) causal link between the events introduced by the relative clause and matrix events. The link between relative clause and matrix events is analyzed as a form of historical necessity, a relation between cause and effect, as understood within a metaphysical modal base.},

    abstract = {[This paper argues that there is a surface structure condition in Spanish
which allows only one negative particle no to appear as a constituent of each simplex
sentence in surface structure. As a result, the number of grammatical negations has no
correlation with the number of S-nodes originally found in deep structure in those trees
which have lost S-nodes in the course of their derivation. This hypothesis is supported
by structures which have undergone Equi-NP Deletion, by sentences with quantifiers, with
adjectives, and with certain adverbs, by certain comparative sentences, and by so-called
simple sentences.]},
